

# The Transition Elements

## The 5th Harmonic— Life's toolbox

The transition elements pose an interesting question when placed on the gyroscope. Given the 8 primary arms are 'dominant', and are used to form the axis of the gyroscope, it means the transition elements fall as a group in the left hand bottom quadrant. This places them over the edge of the Internal Etheric and World Physical spheres. See (pg 63)

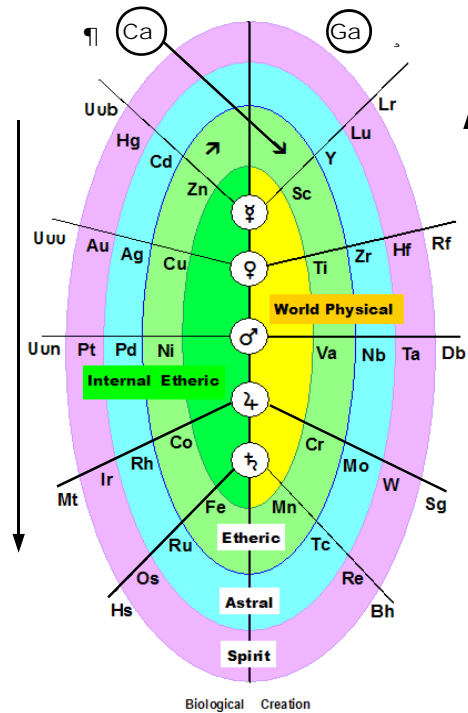

When one looks at the activity of the transition elements, they are involved in acting as catalysts, for life processes in biochemistry. It is therefore no mistake for them to be placed

where the 'life' processes interact with the 'dead' world physical processes. On top of this, their activation of the life sphere corresponds with them coming into manifestation, at the Etheric / Life ring of the process.

**These are the elements that facilitate the activity of life.**

We saw earlier (pg 58) how life processes manifest through the movement of a lemniscate. It would therefore be reasonable to suggest our understanding of these 'elements of life' could be expanded upon by the lemniscate. This would provide a primary 'circle' of the major elements and a secondary circle of the transition elements, by pulling them out and twisting them into a lemniscate.

This action achieves a couple of things. Firstly, it allows these elements to be placed upon a circle, which then brings them into the same context as the gyroscopic references. Secondly, due to the 'flip' that occurs in the lemniscating process, the elements become reversed within the references to the Internal Etheric and World Physical.

In this picture the flow of elements begins with Calcium (20) and moves to Sc (21) and around the circle till Zn (30) and on to Gallium (31).

This reverses the relationship of the trace elements to the 'major' gyroscope. The elements from 21 to 25 were previously on the Internalised Etheric side. They are now placed on the World Physical side of the diagram.

In keeping with RS indication for interpreting the practical use of these lemniscate flips, ala Twelve Sense — the elements can then be read from Calcium to Zinc, Copper and around to Scandium before moving onto Gallium and onwards.

This suggests that due to their placement with the Internal Etheric activities

we would expect the elements Zinc, Copper, Nickel, Cobalt and Iron, will be more active in the support of life processes, than those from Manganese, Chromium through to Scandium. The later elements would be expected to be more related to building structure and fixing forms. Hauschka identifies Mn, Cr and Va as elements that enhance sclerotic and hardening processes.

**This ordering also puts these elements in the order that we find both melting point and hardness increasing,** thus resolving one of the 'odd' phenomena found in the traditional periodic table. (See Hauschka)

### Ten Elements - Fifth harmonic

There are four bands/rings of transition elements, which provides a relationship to the overall energetic bodies via the RING they are placed in. In each of these ring sets there are ten elements.

The MAJOR gyroscope naturally falls upon the 8 arms. This places the MAJOR elements in the second harmonic of the circle, with its multiples of 2,4,8 being present in their relationships. The basic degree division of the circle being 45 degrees. The trace elements on the other hand, being ten in division, suggests they are resonating to the fifth harmonic of the circle. The basic degree division being 36 & 72 degrees. The form arising from this five / ten fold division of a circle is the pentagram.

A range of five fold relationships can therefore be investigated to help identify their nature.

"Amongst the Hebrews, the five point symbol was ascribed to Truth and to the five books of the Pentateuch. The ancient Greeks, called it the Pent alpha. Pythagoreans considered it an emblem of perfection or the symbol of the human being.

The pentagram is associated with the golden ratio (which it includes). The dodecahedron, the fifth Platonic solid, has twelve pentagonal faces, and was considered by Plato to be a symbol of the heavens." (1)

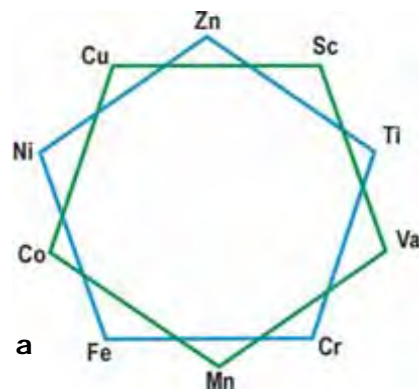

This number can be expected to be an important indicator of life processes, easily seen in the five

fold nature of the human body. Pythagoras, the father of mathematics, identified the relationship of the pentagram to the activities of life, through its exact expression of the 'Golden Mean' ratio. - **1 : 1.618** - It is well recorded that the 'Golden Mean' manifests in the relationships found in life forms and can be said to be the algorithm upon which our holographic creation manifests . This is seen in such things as the ratio of the length of the bones in the hand to each other, the ratio of the face and our view of beauty, the proportions found in plant growth, the share market movement and so on.

### The Fivefold Venus Path

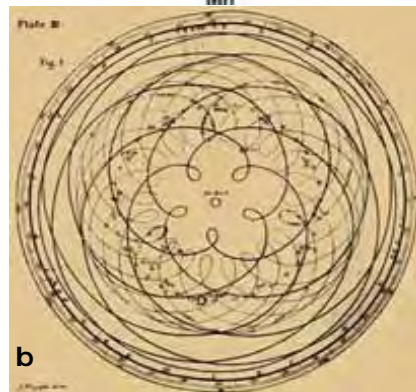

This pentagram picture, shows a tenfold division is represented as two pentagrams, one inside the other, which provides an image of the ten fold division we find in the trace elements. This is one indication that the ten elements could be split into two groups; Pentagram A and Pentagram B. (a)

This division is given relevance by referenced the Venus related pentagrams formed by the Superior and Inferior conjunctions of Venus and the Sun. (b)

Over an eight year period the path of these conjunctions forms two pentagrams in the sky. The diagram shows the Venus path. The obvious pentagram in the middle is the Inferior conjunctions while the Superior conjunctions occur when Venus is at the extremity of its cycle, so that pentagram is drawn on the outer circle.

This provides an image of two separate pentagrams. In 'the' literature these pentagrams are often described as one pentagram with a single point to above, and the other with two points above. Pythagoras and others identified the five fold process as being made up of the four elements of Earth Air Water and Fire with Spirit being the single point above. This represents the four elements dominated or organised by spirit. Some occult groups have given this symbol to people who had achieved a high degree of initiation. The

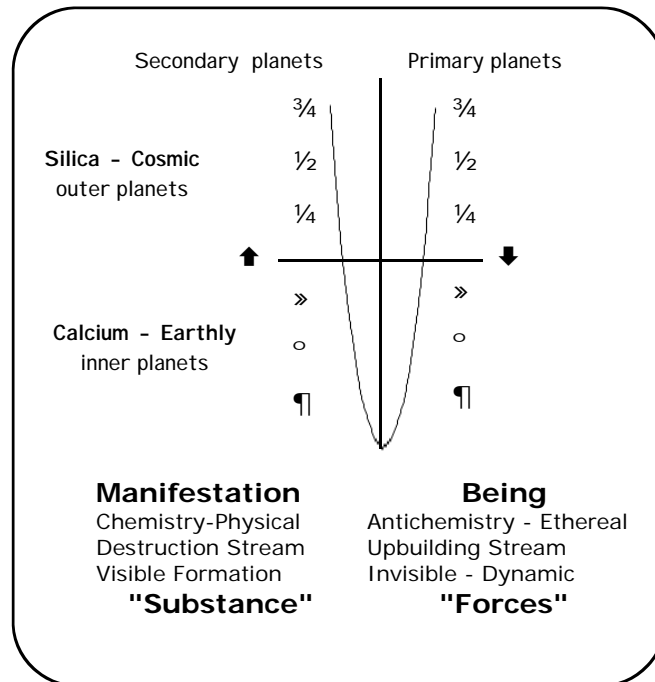

pentagram with the two points at the top is understood to represent matter dominating spirit, and was given to the lower level of initiates, who were still at the stage of their astrality dominating their spirit.

### The Planets

Whenever a five fold series is identified it is possible to relate them to the five planets from Mercury to Saturn. In this regard the Sun and the Moon are treated as 'parents', while the other planets are their 'children'. The Moon could be allotted to Calcium and Gallium to the Sun, in this instance while the other planets are assigned to two elements each (see page 70). This places the Moon with Calcium and a ruler of the Internal Etheric processes, while the Sun is placed with Gallium and rules the World Physical process of manifestation

With this planetary reference comes the possibility of finding a relationship to the plant. This form of double activity of the planets, shown below can be found in relation to plant growth in my chapters on 'Biodynamic Plant Growth', and was put forward in Biodynamic literature by Goethe and developed further by Dr Lievegoed.

The primary process is seen as a developmental (Being) phase, which culminates in germination, followed by a secondary manifestation phase, where the form of the plant we are familiar with grows and finally reaches seeding.

With the transition elements, this 'being' phase, is shown in the activities of the elements of the Internalised Etheric, while the 'manifest' phase is shown in the World Physical side of

the group. (see pg 70)

We can use the planets to deepen our understanding of the quality of the element and then possibly to the plant processes it might effect.

This suggests that Zinc will be a primary Mercury activity, while Scandium will carry a quality of the secondary Mercury activity. In plants Mercury has to do with sap flow and expansive, running growth, Venus flowering, Mars, fertilisation and protein formation, Jupiter oil formation, while Saturn has to do with seed formation.

Reflecting back to the 2 pentagrams, this reference for the transition elements, is the image of a spiritual or coming into 'Being' pentagram group, and a more Earthly or 'Manifest' pentagram. Which is which, I expect, will arise out of a closer inspection of the elements, however a suggestion can be made.

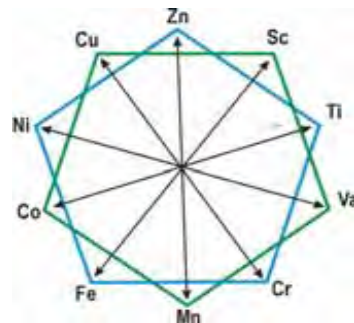

The inferior conjunctions are those where Venus is between the Sun and the Earth, while the Superior conjunctions have Venus on the opposite side of the Sun to the Earth. So one has Venus' activity strong and close, while the other has Venus away, even blocked by the Sun.

With Venus being a feminine planet, you would be expected to find less feminine and more masculine qualities associated with the Superior conjunction set.

The Iron pentagram is the coming to being side, and its group would be expected to be associated with the inferior conjunctions, and the blue pentagram - lets call them the feminine Pentagram A, while the Manganese set would become associated with the superior 'male' conjunctions - Pentagram B.

### Polarities

Another relationship that would naturally be suggested for investigation from the fivefold division is the polarity or opposite relationships between the elements.

- Zinc - Manganese**
- Copper - Chromium**
- Nickel - Vanadium**
- Cobalt - Terillium**
- Iron - Scandium**

## Transition Elements and the Gyroscope

The life enfolding process comes in three stages. The first stage is a pushing out, the second stage is the flip to form the lemniscate, while the third stage is a (en) folding back upon itself.

I have expressed this previously with this diagram. It is therefore reasonable to consider that the transition elements lemniscate, already discussed, can be folded back over the 8 fold gyroscope, thus providing a further cross reference. This provides a reference of the

transition elements to the energetic body activities. So while there is a 'primary' association of these elements as either Internal Etheric or World Physical dominated elements, there is now a Secondary energetic body activity, indicating how these elements work upon the other bodies as well.

One more observation to make from this diagram is that the transition

elements are now placed close to major elements, which we can assume is of the same spiritual body activity. An initial stand out is; Cu sitting next to Calcium; with Silver and Gold, now also being identified as elements which will stimulate the activity of the internalised Etheric body. This activity of these elements are all well known and commonly used. This diagram is a rich source of questions and possible answers to investigate.

## The Transition Elements Suggestions

From these series of 'archetypal acts', a series of cross references have been identified, that provides the possible physical and spiritual activities of the transition elements.

The questions to ask are

- A) Which Arm - the Internalised Etheric or World Physical?
- B) Is it a Primary or Secondary planetary element?
- C) Which 'spiritual' ring is it on?
- D) Which Venus pentagram and position?
- E) Which 'Steiner' Arm is it associated with?
- F) What is its 'major' element pair?

My suggestions are below. What are yours?

and for missile and aircraft parts.  
Molybdenum is valuable as a catalyst  
in the refining of petroleum. It has  
found applications as a filament  
material in electronic and electrical  
applications. Molybdenum is an  
essential trace element in plant  
nutrition, yet highly toxic. evidence  
of liver dysfunction with  
hyperbilirubinemia has been  
reported in workmen chronically  
exposed in a Soviet Mo-Cu plant,  
signs of gout have been found in  
factory workers and among  
inhabitants of Mo-rich areas of  
Armenia, joint pains in the knees,  
hands, feet, articular deformities,

erythema, and edema of the joint  
areas. SO<sub>4</sub> limits Mo uptake , PO<sub>4</sub>  
enhances uptake, Mo important in  
the enzymes nitrogenase and  
nitrogen reductase, works with Fe @  
9:1, when low can lead to N  
deficiency, problem in Si soils, low  
pH and even peat. Cucurbits &  
legumes high Mo need, liming helps.  
High Mo > Cu deficiency

columbite. Formerly known as  
colombium (Cb). used in stainless  
steel alloys for nuclear reactors,  
jets, missiles, cutting tools,  
pipelines, super magnets and  
welding rods. Niobium, when

inhaled, is retained mainly in the lungs, and secondarily in bones. It interferes with calcium as an activator of enzyme systems. In laboratory animals, inhalation of niobium nitride and/or pentoxide leads to scarring of the lungs at exposure levels of 40 mg/m<sup>3</sup>.
